Question: 45

An administrator is trying to create a new set of image mappings that will map to vSphere templates that have been added to an existing vCenter Server cloud account. When the administrator tries to select the Windows Server 2016 image, nothing appears on the list. The administrator has confirmed that the vSphere template exists in the correct location within vCenter Server.

Which action should the administrator take to be able to create the new image mapping? (Choose the best answer.)

- A. Validate the vCenter Server cloud account credentials.
- B. Check to make sure image synchronization is successful for the vCenter Server cloud account.
- C. Make sure the correct NSX endpoint is selected for the vCenter Server cloud account.
- D. Add a new capability tag to the vCenter Server cloud account.

Answer: B

An administrator configures a lease policy, (“1 Day Lease”), for the App-Dev project so that machines have a starting lease of one day and a maximum lease of five days.

The following week, the administrator is assigned a ticket to address an issue with machines being deleted without any notifications being received. The administrator requests a new machine deployment through the App-Dev project’s service catalog. Given the one day lease period, the administrator expects to receive an automated “Lease Expiring” system immediately following a successful deployment; however, the email is not received. The administrator checks the deployment that has just been created (as displayed in the exhibit) and confirms that the “1 Day Lease” policy has been correctly applied.

Which action should the administrator take to resolve this issue? (Choose the best answer.)

- A. Add an email endpoint.
- B. Configure the notification email Server.
- C. Ensure the users have notifications enabled.
- D. Run the Configure mail workflow.
