Managing Jira Projects for Data Center and Server

ORDER FULL VERSION

Question: 101

You are setting up a Jira project and want to define different sets of permissions for different user roles. Which configuration option should you modify to achieve this?

A. Project permission scheme
B. Workflow schemes
C. Global permission scheme
D. Issue-level security

Answer: A

Explanation: To define different sets of permissions for different user roles in a Jira project, you need to modify the project's permission scheme. The project permission scheme allows you to assign specific permissions to different user roles, controlling their access and actions within the project.

Question: 102

You want to create a board that displays issues from multiple projects. Which configuration option in Jira allows you to achieve this?

A. Quick filters
B. Swimlanes
C. Card colors
D. Board filter

Answer: D

Explanation: The board filter configuration option in Jira allows you to specify the criteria for selecting issues to display on a board. By configuring the board filter, you can include issues from multiple projects and define the specific criteria for issue selection.

Question: 103

You want to limit the visibility of certain custom fields to specific groups of users in Jira. Which configuration option should you modify to achieve this?

A. Notification schemes
B. Workflow schemes
C. Field configurations
D. Issue type schemes

Answer: C

Explanation: Field configurations in Jira allow you to define the visibility of custom fields for different groups of users. By modifying the field configurations, you can restrict the visibility of certain custom fields to specific user groups, ensuring data privacy and appropriate access control.

Question: 104

You want to automate certain actions or notifications when specific events occur in Jira. Which configuration option should you use to achieve this?

A. Workflow validators
B. Workflow conditions
C. Workflow post functions
D. Workflow transitions

Answer: C

Explanation: Workflow post functions in Jira allow you to automate actions or notifications when specific events occur. By configuring workflow post functions, you can define automated actions such as sending notifications, updating fields, or triggering external integrations based on specific workflow events.

Question: 105

You want to create a custom field in Jira to capture additional information for specific issue types. Which configuration option should you use to define this custom field?

A. Workflow schemes
B. Field configurations
C. Notification schemes
D. Issue type schemes

Answer: B

Explanation: Field configurations in Jira allow you to define custom fields and their attributes. By using field configurations, you can create a custom field to capture additional information for specific issue types, such as text fields, checkboxes, or dropdown menus.

Question: 106

You want to visualize the progress of work items on a board using different colors to represent different issue priorities. Which configuration element in

Jira allows you to achieve this?

A. Card colors
B. Swimlanes
C. Quick filters
D. Priority levels

Answer: A

Explanation: Card colors in Jira allow you to visually represent different issue priorities on a board. By configuring card colors, you can assign specific colors to different priority levels, providing a quick and visual representation of issue priorities on the board.

Question: 107

You want to ensure that only specific users can resolve issues in a Jira project. Which configuration option should you modify to enforce this restriction?

A. Workflow validators
B. Workflow post functions
C. Workflow transitions
D. Workflow conditions

Answer: D

Explanation: Workflow conditions in Jira allow you to define criteria that must be met for an issue transition to occur. By configuring workflow conditions, you can enforce restrictions to ensure that only specific users have the ability to resolve issues in a project.

Question: 108

You want to configure a Jira board to display issues in a specific order based on their priority. Which configuration option should you use to achieve this?

A. Quick filters
B. Ranking
C. Card colors
D. Swimlanes

Answer: B

Explanation: The ranking feature in Jira allows you to order issues based on their priority. By configuring ranking, you can set the relative importance of issues, and the board will display them in the specified order.

Question: 109

You want to provide users with the ability to add comments to issues in a Jira project. Which configuration option should you enable to allow this?

A. Issue-level security
B. Workflow validators
C. Notification schemes
D. Comment permissions

Answer: D

Explanation: Comment permissions in Jira allow you to control who can add comments to issues. By enabling comment permissions, you provide users with the ability to add comments and collaborate on issues within the project.

Question: 110

You want to configure a Jira project to automatically assign newly created issues to specific users based on their issue type. Which configuration option should you use to achieve this?

A. Workflow validators
B. Workflow conditions
C. Workflow post functions
D. Component lead

Answer: C

Explanation: Workflow post functions in Jira allow you to perform actions automatically during or after an issue transition. By configuring a workflow post function, you can automatically assign newly created issues to specific users based on their issue type.

Question: 111

You want to set up email notifications for specific events in Jira, such as issue creation or status changes. Which configuration option should you modify to enable email notifications?

A. Comment permissions
B. Workflow validators
C. Issue-level security
D. Notification schemes

Answer: D

Explanation: Notification schemes in Jira allow you to define the recipients and events for email notifications. By modifying the notification scheme, you can enable email notifications for specific events, ensuring that users are informed about important changes in the project.

Question: 112

You want to create a custom field in Jira that allows users to select multiple options from a predefined list. Which configuration option should you use to define this custom field?

A. Field configurations
B. Workflow schemes
C. Notification schemes
D. Custom field schemes

Answer: A

Explanation: Field configurations in Jira allow you to create custom fields and define their attributes. By using field configurations, you can create a custom field that allows users to select multiple options from a predefined list, such as a multi-select dropdown menu.

Question: 113

You want to track the progress of work items on a board using a visual representation of their status. Which configuration element in Jira allows you to achieve this?

A. Swimlanes
B. Quick filters

C. Card colors
D. Workflow transitions

Answer: A

Explanation: Swimlanes in Jira allow you to visually represent the status of work items on a board. By configuring swimlanes, you can group and display issues based on their status, providing a clear visual representation of work progress.

Question: 114

You want to customize the fields displayed on the issue view screen in Jira for a specific project. Which configuration option should you modify to achieve this?

A. Field configurations
B. Workflow schemes
C. Notification schemes
D. Issue type schemes

Answer: A

Explanation: Field configurations in Jira allow you to customize the fields displayed on the issue view screen. By modifying the field configurations, you can choose which fields are visible and editable on the issue view screen for a specific project.

Question: 115

You want to configure a Jira project to display a specific set of issue types on

the board. Which configuration option should you modify to achieve this?

A. Issue type schemes
B. Swimlanes
C. Card colors
D. Board filter

Answer: A

Explanation: Issue type schemes in Jira allow you to define the available issue types for a project. By modifying the issue type scheme, you can specify the set of issue types that should be displayed on the board for the project.

Question: 116

You want to track the progress of work items on a board using visual indicators such as checklists or progress bars. Which configuration element in Jira allows you to achieve this?

A. Quick filters
B. Custom field configurations
C. Card colors
D. Swimlanes

Answer: B

Explanation: Custom field configurations in Jira allow you to define visual indicators such as checklists or progress bars to track the progress of work items on a board. By configuring custom field configurations, you can add visual elements to the board that provide additional information or status updates for each issue.
